DETAILED ACTION

Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. The abstract of the disclosure is objected to because it contains more than 150 words.

Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-2, 6-7, 10, 12-13, and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Koike (US5544012).

Koike discloses a chamber (Figure 3), supporting a plurality of devices (24), a separate controllable fan (13a) associated with each device under test and located in a space above device

under test, a source of cooling air (15), an exhaust (27, 17a), a damper (25, 23), source of cooling air plenum (16a), a fan (21) providing an airflow to the plenum, and a fan (22) receiving a return airflow, a plurality of chambers (Figure 3), and vertically stacked boards (Figure 3).

Allowable Subject Matter

5. Claims 3-4, and 18-23 are allowed.
6. Claims 5, 9, 11, 14-15, and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
